

Dear Fellow Shooters,

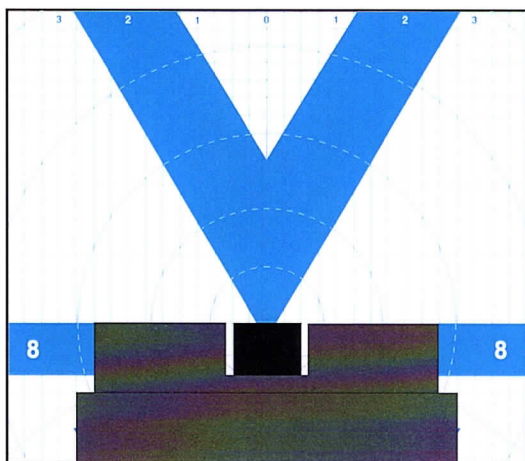

Thank you for selecting the revolutionary **VICTORY Series** targets designed specifically for open-sight firearms by Mountain Plains Industries. These targets are unique because they do not use the traditional black “bulls-eye”, but rather a bright blue “V” as an aiming point.

Why a “V”? The “V” affords the shooter a more precise aiming point for open-sight firearms because it points to the front blade or bead sight, like an arrowhead! This causes the shooter to focus on a smaller area than a bulls-eye and helps the shooter repeat the same hold on the target, which results in better shot-to-shot consistency, i.e., tighter groups.

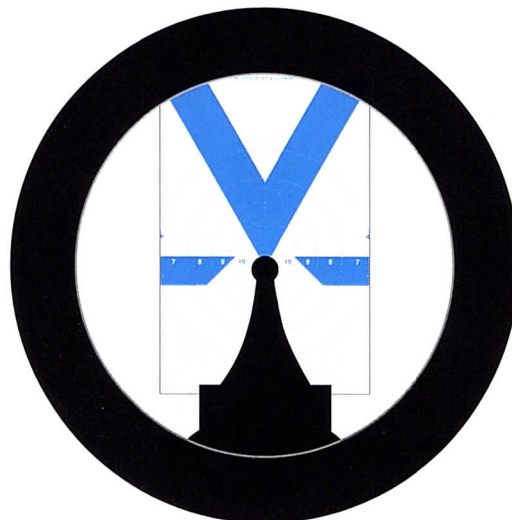

Why blue? Optometrists have found that the human eye can more easily see blues than colors in the red or orange spectrum, which is probably why the lights on law enforcement vehicles in most states are now blue. The shade of blue used for all our targets is sufficiently dark to provide good optical contrast against the white background, while being light enough to permit the shooter to see the bullet holes within the colored areas of the target. Also, there is no flare in bright sunlight as is the case with the most blaze-orange targets. We call this color *bright impact blue!*

There are two blue bars, one on each side of the V-shaped aiming point. They are positioned to draw the shooter’s eye to the point of the V and provide a horizontal reference for aiming squarely at the target. When correctly aligned, no blue should be visible above the rear notch sight and no white should be visible between the point of the V and the front blade or bead sight.

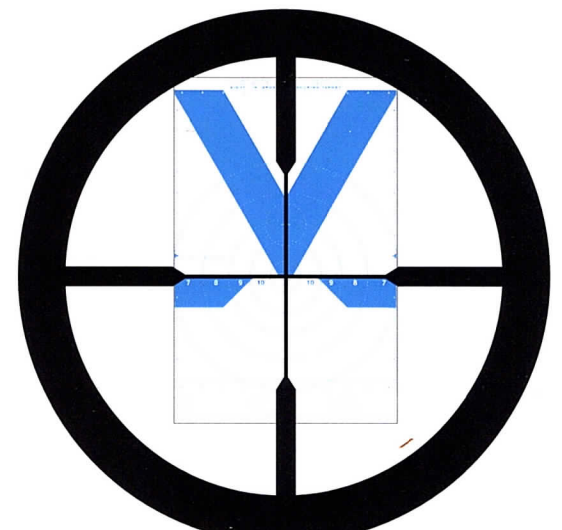

Although the **VICTORY Series** targets were designed for use with open sight firearms, they may also be used with scoped firearms by resting the V on top of the horizontal crosshair and “splitting” the V with the vertical crosshair. (See illustrations below.)

Peep Sight

Scope

There is a **VICTORY Series** target sized 8½" x 11" available via our **Precision ⊕ Plus** series, which provides a single 4½" V-shaped aiming point, while our 11" x 17" sized targets showcase additional V-shaped configurations, as listed below:

- The **VICTORY Handgun** model is recommended for handgun use at distances from 3 meters (10 feet) to 25 yards. This target provides two 4½" V-shaped aiming points.
- The **VICTORY Rifle** model is intended for open-sight rifle shooting at 100 yards/meters and for handgun use at distances from 25 yards or beyond. This target provides a 2" circle, centered within a single 9" V-shaped aiming point, to be used as a long range sight-in area for bullet placement of 2" to 3" above the point of aim at 100 yards.
- The **VICTORY .22 Rim Fire** model is intended for use with, as the name suggests, .22 Rim Fire rifles at shooting ranges of 50 feet and 75 feet, using six 2" Vs and three 2¾" Vs, respectively V-shaped aiming points. This target also contains “scoring rings” exactly the same as the corresponding NRA competition rifle targets.
- The **VICTORY - Shooting Range** model is a large 18" x 24" target intended for handgun use at indoor/outdoor Shooting Ranges at distances from 3 meters (10 feet) to 25 yards (75 feet). The target provides the shooter five 4½" V-shaped aiming points with NRA scoring rings.

These targets may be used to sight-in your firearms, test various factory loads or custom loaded ammunition for accuracy and group size, or to score your groups using the traditional competitive shooting method.

- The targets are printed on a 1" grid with ¼" background to facilitate the accurate measurement of groups fired.
- All the models contain scoring rings from ‘X’ thru ‘7’ that are identical to the scoring rings on an NRA Official Competition 25 yard Handgun target or ‘10’ thru ‘4’ scoring rings on the NRA 50 foot and 75 foot .22 Rim Fire competition targets.
- Like all other targets produced by Mountain Plains in the **Precision ⊕ Plus** (for scoped firearms), the **VICTORY Series** model targets have an area provided for the shooter to record pertinent shooting data and come pre-drilled to facilitate keeping as a permanent record in a three ring binder.
- Each target is produced on higher quality/heavier grade paper stock than other targets and come in pad form (25 targets per pad) for your convenience at home or at the range, except for the **VICTORY – Shooting Range** model targets which are available only as individual sheets.

Mountain Plains Industries is committed to the highest standards of quality and customer satisfaction, so please feel free to call me at (434) 466-3000 with your comments or suggestions of ways we might improve our targets.

Sincerely,

James H. (Jim) Wilson, III
